In the era of the Anthropocene, site matters are more pressing than ever. Building on the concepts, theories, and multi-disciplinary approaches raised in the first edition, this publication strives to address the changes that have taken place over the last 15 years with new material to complement and re-position the initial volume. Reaching across design disciplines, this highly illustrated anthology assembles essays from architects, landscape architects, urban designers, planners, historians, and artists to explore ways to physically and conceptually engage site. Thoughtful discourse and empirically grounded pieces combine to provide the language and theory to contextualize the meanings of site in the built environment. The increasingly complex hybridity of constructed environments today demands new tools for thinking about and working with site. Drawing contributions from outside and within the traditional design disciplines, this edition will trace important developments in site thinking with new essays on topics such as climate change, landscape as infrastructure, shifts from global to planetary urbanization debates, and the proliferation of participatory site transformation practices. Edited by two leading practitioners and academics, Site Matters juxtaposes timeless contributions from individuals including Elizabeth Meyer, Robert Beauregard, and Robin Dripps with original new writings from Peter Marcuse, Jane Wolff, Neil Brenner, and Thaisa Way, amongst others, to recontextualize and reignite the debate around site. An ideal text for students, academics, and researchers interested in site and design theory.

How do you find your way in an age of information overload? How can you filter streams of complex information to pull out only what you want? Why does it matter how information is structured when Google seems to magically bring up the right answer to your questions? What does it mean to be "findable" in this day and age? This eye-opening new book examines the convergence of information and connectivity. Written by Peter Morville, author of the groundbreaking Information Architecture for the World Wide Web, the book defines our current age as a state of unlimited findability. In other words, anyone can find anything at any time. Complete navigability. Morville discusses the Internet, GIS, and other network technologies that are coming together to make unlimited findability possible. He explores how the melding of these innovations impacts society, since Web access is now a standard requirement for successful people and businesses. But before he does that, Morville looks back at the history of wayfinding and human evolution, suggesting that our fear of being lost has driven us to create maps, charts, and now, the mobile Internet. The book's central thesis is that information literacy, information architecture, and usability are all critical components of this new world order. Hand in hand with that is the contention that only by planning and designing the best possible software, devices, and Internet, will we be able to maintain this connectivity in the future. Morville's book is highlighted with full color illustrations and rich examples that bring his prose to life. Ambient Findability doesn't preach or pretend to know all the answers. Instead, it presents research, stories, and examples in support of its novel ideas. Are we truly at a critical point in our evolution where the quality of our digital networks will dictate how we behave as a species? Is findability indeed the primary key to a successful global marketplace in the 21st century and beyond. Peter Morville takes you on a thought-provoking tour of these memes and more -- ideas that will not only fascinate but will stir your creativity in practical ways that you can apply to your work immediately. "A lively, enjoyable and informative tour of a topic that's only going to become more important." --David Weinberger, Author, Small Pieces Loosely Joined and The Cluetrain Manifesto "I envy the young scholar who finds this inventive book, by whatever strange means are necessary. The future isn't just unwritten--it's unsearched." --Bruce Sterling, Writer, Futurist, and Co-Founder, The Electronic Frontier Foundation "Search engine marketing is the hottest thing in Internet business, and deservedly so. Ambient Findability puts SEM into a broader context and provides deeper insights into human behavior. This book will help you grow your online business in a world where being found is not at all certain." --Jakob Nielsen, Ph.D., Author, Designing Web Usability: The Practice of Simplicity "Information that's hard to find will remain information that's hardly found--from one of the fathers of the discipline of information

architecture, and one of its most experienced practitioners, come penetrating observations on why findability is elusive and how the act of seeking changes us." --Steve Papa, Founder and Chairman, Endeca "Whether it's a fact or a figure, a person or a place, Peter Morville knows how to make it findable. Morville explores the possibilities of a world where everything can always be found--and the challenges in getting there--in this wide-ranging, thought-provoking book." --Jesse James Garrett, Author, The Elements of User Experience "It is easy to assume that current searching of the World Wide Web is the last word in finding and using information. Peter Morville shows us that search engines are just the beginning. Skillfully weaving together information science research with his own extensive experience, he develops for the reader a feeling for the near future when information is truly findable all around us. There are immense implications, and Morville's lively and humorous writing brings them home." --Marcia J. Bates, Ph.D., University of California Los Angeles "I've always known that Peter Morville was smart. After reading Ambient Findability, I now know he's (as we say in Boston) wicked smart. This is a timely book that will have lasting effects on how we create our future. --Jared Spool, Founding Principal, User Interface Engineering "In Ambient Findability, Peter Morville has put his mind and keyboard on the pulse of the electronic noosphere. With tangible examples and lively writing, he lays out the challenges and wonders of finding our way in cyberspace, and explains the mutually dependent evolution of our changing world and selves. This is a must read for everyone and a practical guide for designers." --Gary Marchionini, Ph.D., University of North Carolina "Find this book! Anyone interested in making information easier to find, or understanding how finding and being found is changing, will find this thoroughly researched, engagingly written, literate, insightful and very, very cool book well worth their time. Myriad examples from rich and varied domains and a valuable idea on nearly every page. Fun to read, too! --Joseph Janes, Ph.D., Founder, Internet Public Library

To celebrate its 50th anniversary, a team of landscape architects and planners from PennDesign have showcased some of the most advanced ecological design projects in the world today. A residence is not just a place to eat and sleep--it is a headquarters and home. And it is the residential designer who must understand the uses to which the home will be put. Written with the designer's role in mind, Residential Planning and Design bridges the gap between drafting books and decorator texts to provide a comprehensive guide for residential planning from conception through construction. Information on housing traditions and trends (both American and international), materials and construction techniques, and the needs of individuals, families, and communities all help inform intelligent design decisions, from insulation to the placement of light switches. Particular attention is given to the possibilities for green design and environmentally friendly technologies. Both practical and progressive, prepares designers for successful professional relationships with the clients who hire them--and with the architects, engineers, and contractors they work with.

This introduction to the field of urban design offers a comprehensive survey of the processes necessary to implement urban design work, explaining the vocabulary, the rules, the tools, the structures, and the resources in clear and accessible style. Providing a comprehensive framework for understanding urban design principles and strategies, the author argues that urban design is both a process and a collaboration in which the different forces involved are knit together. Moving from the regional scale down to the scale of places, the book examines the goals and strategies of the urban designer from the viewpoints of the private sector, public sector, and community. The text is illustrated throughout with photographs and drawings that make theory and practice relevant and alive.

Space planning involves much more than sketching a preliminary floor plan. A designer must take a client's programming needs into account and must also consider how other factors such as building codes and environmental factors affect a spatial composition. Space Planning Basics, now in its Third Edition, offers a highly visual, step-by-step approach to developing preliminary floor plans for commercial spaces. The book provides tools for visualizing space and walks the designer through other considerations such as building code requirements and environmental control needs. Specific programming techniques covered include matrices, bubble diagrams, CAD templates, block plans, and more. New to this edition are coverage of the basics of stair design, an essential aspect for planning spaces.

This is a book about everything. Or, to be precise, it explores how everything is connected from code to culture. We think we're designing software, services, and experiences, but we're not. We are intervening in ecosystems. Until we open our minds, we will forever repeat our mistakes. In this spirited tour of information architecture and systems thinking, Peter Morville connects the dots between authority, Buddhism, classification, synesthesia, quantum entanglement, and volleyball. In 1974 when Ted Nelson wrote "everything is deeply intertwingled," he hoped we might realize the true potential of hypertext and cognition. This book follows naturally from that.

For America's rural and suburban areas, new challenges demand new solutions. Author Randall Arendt meets them in an entirely new edition of Rural by Design. When this planning classic first appeared 20 years ago, it showed how creative, practical land-use planning can preserve open space and keep community character intact. The second edition shifts the focus toward infilling neighborhoods, strengthening town centers, and moving development closer to schools, shops, and jobs. New chapters cover form-based codes, visioning, sustainability, low-impact development, green infrastructure, and more, while 70 case studies show how these ideas play out in the real world. Readers —rural or not—will find practical advice about planning for the way we live now.

We can't predict the future, yet we do it all the time. We organize projects, events, days, weeks, and years. We plan to buy a home, build a career, travel, get married, raise children, teach a class, retire, or get in shape. Our ability to model the world as it is and might be is a gift, but mental time travel is also really hard. Fortunately, since planning is a skill, everyone from playful improviser to rigorous planner can greatly improve, if they are ready to learn: The principles and practices of nonlinear planning. How to grow and sustain hope with willpower and waypower. When to pivot or persist with paths, goals, values, and metrics. How myths, memories, fears, and feelings shift the future. Why the plans of an octopus are the product of evolution. How artificial intelligence is poised to transform what we plan. If you hate planning, you're doing it wrong. The uncertainty of change makes us crave chaos or control, but it's as dangerous to be rigid as it is to move fast and break things. To organize the future, we will find better ways, because happiness is a prediction, and it's also the freedom you'll feel upon realizing there is no one right way to plan.

Successful web design teams depend on clear communication between developers and their clients—and among members of the development team. Wireframes, site maps, flow charts, and other design diagrams establish a common language so designers and project teams can capture ideas, track progress, and keep their stakeholders informed. In this all new edition of Communicating Design, author and information architect Dan Brown defines and describes each deliverable, then offers practical advice for creating the documents and using them in the context of teamwork and presentations, independent of methodology. Whatever processes, tools, or approaches you use, this book will help you improve the creation and presentation of your wireframes, site maps, flow charts, and other deliverables. The book now features: An improved structure comprising two main sections: Design Diagrams and Design Deliverables. The first focuses on the nuts and bolts of design documentation and the second explains how to pull it all together. New deliverable: design briefs, as well as updated advice on wireframes, flow charts, and concept models. More illustrations, to help designers understand the subtle variations and approaches to creating design diagrams. Reader exercises, for those lonely nights when all you really want to do is practice creating wireframes, or for use in workshops and classes. Contributions from industry leaders: Tamara Adlin, Stephen Anderson, Dana Chisnell, Nathan Curtis, Chris Fahey, James Melzer, Steve Mulder, Donna Spencer, and Russ Unger. "As an educator, I have looked to Communicating Design both as a formal textbook and an informal guide for its design systems that ultimately make our ideas possible and the complex clear." —Liz Danzico, from the Foreword

How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In Speculative Everything, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose "what if" questions that are intended to open debate and discussion about the kind of future people want (and do not want). Speculative Everything offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

Climate change and dwindling global resources bring with them a set of complex challenges, demanding new design and planning approaches that achieve more with less. Climate: Design, written for designers, architects, planners, policymakers, and academics alike, explores the current paradigm shift and illustrates how new thinking can convert investments in urban infrastructure, land use, and development into resilient and enduring support systems for human and environmental prosperity. The design professions—architecture, city planning, landscape architecture, and urban design—share a great deal in terms of intellectual antecedents, professional ideals, and praxis. In particular, they share a commitment to creating better cities—whether at the scale of buildings, neighborhoods, or city-regions. But who decides what constitutes a "good" city, and how should such an ideal be implemented? In Better by Design? Paul Knox explores the intellectual roots of the design professions, showing how architects, planners, and other designers have traditionally interpreted their roles and implemented their ideas in cities across North America and the UK. Drawing on his long record of research and award-winning publications on the social production of the built environment, Knox offers a critical appraisal of their ultimate effectiveness in achieving the goal of creating and sustaining good cities.

"Although the live-work concept is now accepted among progressive urban design and planning professionals, the specifics that define the term, and its application, remain sketchy. This encyclopedic work is sure to change that, providing the critical information that is needed by architects, planners and citizens." -Peter Katz, Author, The New Urbanism, and Planning Director, Arlington County, Virginia Live-Work Planning and Design is the only comprehensive guide to the design and planning of live-work spaces for architects, designers, and urban planners. Readers will learn from built examples of live-work, both new construction and renovation, in a variety of locations. Urban planners, developers, and economic development staff will learn how various municipalities have developed and incorporated live-work within building codes and city plans. The author, whose pioneering website, www.live-work.com, has been guiding practitioners and users of live-work since 1998, is the United States' leading expert on the subject.

Every garden benefits from planning. Whatever you want from your garden, whether it be a rambling verdant retreat, a wildlife haven, an outdoor dining room or a hassle-free backyard, good planning and design are essential. This book encourages you to look at what you want

from your garden, to plan around those needs, and to create a personalized garden that you can enjoy for years to come. Over 50 different types of gardens are planned out, grouped into the most popular areas: surprisingly simple water gardens, stylish Japanese gardens, low maintenance gardens and gardens for entertaining, playing, eating, and growing things in. Sizes and shapes are catered for too; L-shaped or sloping, balcony, patio or roof terrace, small or large, all are shown with excellent, original ideas for making the most of your natural assets. Each plan is large and clear with a useful key identifying each element of the design, as well as practical step-by-step tips on how to achieve certain elements in the design, whether it be laying gravel, maintaining container plants or constructing a pond. Examples of plants suitable for the different types of gardens are photographed and described, so that you can choose the right plants for the best positions, conditions and styles.
